

# geoparse

May 12, 2021

**Objective** The objective of the project is to learn reading, manipulating and analysing geographic data and geospatial operations and analysis using python. New York city's child care center dataset and population statistics dataset is used for geospatial analysis. Identify geographical distribution of children aged 0-5 from population statistics and distribution of child care centers

**Dataset** Child care center -<https://hifld-geoplatfrom.opendata.arcgis.com/datasets/child-care-centers/> Population Statistics -<https://data.cccnewyork.org/data/download>

### 0.0.1 Pre-project work

Some pre-project work was done to understand basics of geodataframe and geoprocessing. Below are few code snippets from the pre-project work based on sweden pre-school dataset and population statistics.

```
[4]: population = gpd.read_file("dataset/dataset/pop_statistics.shp")
```

```
[5]: population.tail()
population.iloc[[1,25,40],[1,2,3,4,31]]
```
